

Logistics Systems Design: Introduction

- 1. Introduction**
2. Forecasting
3. Transportation Systems
4. Transportation Models
5. Inventory Systems
6. Supply Chain Systems

7-Mar-03 Logistics Systems Design Marc Goetschalckx

Introduction Overview

- * Logistics Definition
- * Logistics Planning
- * Engineering Design Process
- * Modeling
- * Algorithms

7-Mar-03 Logistics Systems Design Marc Goetschalckx

Introduction Overview

- * **Logistics Definition**
- * Logistics Planning
- * Engineering Design Process
- * Modeling
- * Algorithms

7-Mar-03 Logistics Systems Design Marc Goetschalckx

Logistics Is

- * Material, Information, and Economics
- * Movement, Storage, Transformation, and Control
- * On a Worldwide Scale
- * From Raw Materials, to Consumer, to Recycling

7-Mar-03 Marc Goetschalckx

CLM Definition

Logistics is the combination of transport, storage, and control of material all the way from the supplier, through the various facilities, to the customer, and the collection of all recyclable materials at each step.

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Characteristics

- * *Important and Pervasive*
- * *Integrated*
- * *Global*
- * *Computers & Communications*
- * *Radical Changes*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Size

- * *680 Billion Annually (1996)*
- * *11 % GNP*
- * *20 % Product Sales Price*
- * *60 % of Combined Health Care + Social Security + Defense Costs*
- * *World Trade Will Quadruple by 2010*
- * *Number of Trucks Will Double by 2003*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Functions are Integrated and Comprehensive

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Supply Chain Networks

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Business Value Types

- * Form (Design and Manufacturing)
- * Time (Logistics)
- * Place (Logistics)
- * Possession (Sales and Marketing)

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Connects Production with Sales

- * Production
 - Economies of scale
 - Specialization
- * Sales and Marketing
 - Customer service requirements
- * Logistics
 - Utility of time and place
 - Essence of trade

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Direct Shipping Cost Tradeoff

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Cross Docking Material Handling Tradeoff

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Is Global

- * *Mature Replacement Economies in the Industrialized Nations*
- * *Fastest Growth in Developing Countries*
- * *Global Corporations*
- * *Intense Competition*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Different Corporate Tax Rates

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Communications & Computers

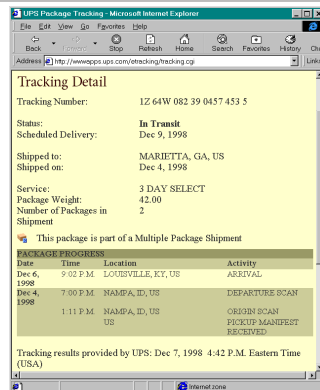

- * *Dramatic Increase over Time*
 - *"Bubba" Period*
 - *Instantaneous Tracking and EDI*
 - *Electronic Commerce*
 - *Virtual Logistics Enterprise*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Web-Based Real-Time Tracking of Shipments

7-Mar-03

Marc Goetschalckx

Logistics Experiences Dramatic Changes

- * **New Logistics Strategies...**
 - Outsourcing
 - Third Party Logistics (TPL)
 - Electronic Commerce
 - Vendor Managed Inventory (VMI)

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics is Constantly Changing

- * **Requires People with the Right Skills**
 - Business Processes
 - Analytical Methods
 - Rapid Computer Implementation
 - Effective Communications with Users
 - Lifelong Continuing Education

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Introduction Overview

- * **Logistics Definition**
- * **Logistics Planning**
- * **Engineering Design Process**
- * **Modeling**
- * **Algorithms**

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Common Logistics Questions

- * *Where to purchase ?*
- * *Where to produce ?*
- * *Where to assemble ?*
- * *Where to hold in inventory ?*
- * *How to transport ?*
- * *How to deliver ?*
- * *How to expand or retreat ?*
- * *How to recycle ?*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Three Levels of Logistics Planning

- * *Operational*
- * *Tactical*
- * *Strategic*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Operational Logistics

- * *Examples:*
 - *What orders to load on a particular truck*
 - *Daily production scheduling*
 - *How much product to reorder*
- * *Short Permanence of Decisions*
- * *Extensive, Detailed, and Accurate Data Immediately Available*
- * *Many but Small Penalties and Rewards*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Tactical Logistics

- * *Examples:*
 - *Monthly production schedule*
 - *Carrier Selection*
 - *Inventory Levels*
- * *Medium Permanence of Decisions*
- * *Data Available after some Processing*
- * *Medium Penalties and Rewards*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Strategic Logistics

- * *Examples:*
 - *Build a manufacturing plant*
 - *Select third party logistics*
 - *Define customer-product groups*
- * *Long Range Permanence of Decisions*
- * *Heterogeneous Data if Available*
- * *Company Vision and Survival*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Matrix Organization of Planning Modules

Strategic	Strategic Enterprise Planning			Strategic Demand Planning
	Tactical			Tactical Demand Planning
Operational	Master Production and Distribution Planning			
	Material Requirern. Planning	Production Planning	Distribution Planning	Operational Demand Planning
Execution	Purchasing	Scheduling	Vehicle Dispatching	Demand Monitoring

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Objectives for Mandated Customer Service

- * *Cost Minimization*
St. service constraints
- * *Return on Investment Maximization*
St. service constraints
- * *Reliability*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Objectives for Dependent Customer Service

- * *Profit Maximization*
St. budget constraints
- * *Service Maximization*
St. budget constraints
- * *Responsiveness*
- * *Flexibility*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Total System Cost

- * *Total Cost of Achieving a Mission*
 - *Mission = Set of customer service goals for a particular product*
- * *Traditional Accounting Insufficient*
 - *Arbitrary allocation of overhead costs*
 - *Functional areas based rather than output based*
- * *Based on Activity Based Costing*
- * *Reduced to a Common Time Frame*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Cost Categories

- * *Controllable versus Invariant*
 - *Avoided if the mission were discontinued*
 - *Transportation versus pension liabilities*
- * *Fixed versus Variable*
 - *Fixed are incurred when an activity is executed*
 - *Variable change with the intensity of the activity*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Total System Cost Components

- * *Raw Material Costs*
- * *Production Costs*
- * *Linehaul Transportation Costs*
- * *Local Delivery Costs*
- * *Facility Costs*
- * *Storage and Handling Costs*
- * *System Inventory Costs*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

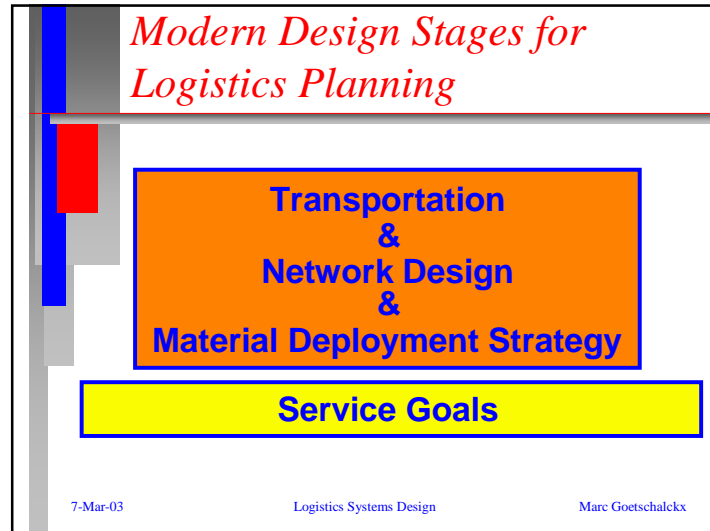

Traditional Design Stages for Logistics Planning

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Enterprise Resource Planning (ERP) Software

- * Logistics Systems Status
- * "Bookkeeping"
 - Transactional
 - Data Warehouse
- * Advantages
 - Enterprise Standardization
 - Data Integration
 - Up-To-Date Data
 - Multinational

7-Mar-03 Logistics Systems Design Marc Goetschalckx

ERP Vendors

- * Growing Importance
- * Major Vendors
 - SAP (Financial),
 - Avensis (Baan) (Manufacturing, Transportation),
 - PeopleSoft (Human Resources)
 - ...

7-Mar-03 Logistics Systems Design Marc Goetschalckx

Supply Chain Management (SCM) Software

- * Logistics Systems Configuration and Planning
- * "Optimizing"
 - Operations Research
 - Constraint Based Logic
- * Interface with ERP
- * Also called Advanced Planning Systems (APS)

7-Mar-03 Logistics Systems Design Marc Goetschalckx

SCM Vendors

- * Strong Consolidation
- * Major Vendors
 - I2 - InterTrans
 - Manugistics
 - Chesapeake – SupplyChain
 - J.D. Edwards

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Software Reference

- * Andersen Consulting, “Logistics Software,” jointly with Council of Logistics Management, Oak Brook, IL, 1992 and yearly updates.

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Logistics Planning Software Catalogue

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Introduction Overview

- * Logistics Definition
- * Logistics Planning
- * Engineering Design Process
- * Modeling
- * Algorithms

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Engineering Design Process

- ① Formulate the Problem
- ② Collect Data and Analyze the Problem
- ③ Generate Alternative Solutions
- ④ Evaluate Design Alternatives
- ⑤ Select the Preferred Design(s)
- ⑥ Specify the Solution
- ⑦ Evaluate the Design in Use

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Introduction Overview

- * Logistics Definition
- * Logistics Planning
- * Engineering Design Process
- * **Modeling**
- * Algorithms

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

What is a Model

- * Abstract Representation of a Real World System
 - Easier to manipulate
 - Provides better insight
- * Everybody Uses Models to Make Decisions

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Framework

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Data

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Data Sources

- * *Business Operating Documents*
 - Sales orders, customer data, freight bills
- * *Business Documents*
 - Annual report, accounting (activity-based-costing)
- * *Logistics Research Data*
- * *Published Reference Data*
 - Trade magazines, census data, press

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Data Example: Customer Demand History Database

CUSTID	County	City	State	ZIP	TotalDemand
1606321	JENKINS	Perkins	GA	30622	1500
1607794	LEE	Leesburg	GA	31763	166
1602653	CATOOSA	Ringgold	GA	30736	17900
1613343	COLQUITT	Dorhun	GA	31744	150
1692721	JENKINS	Millen	GA	30442	10250

Information Example: Customer Locations

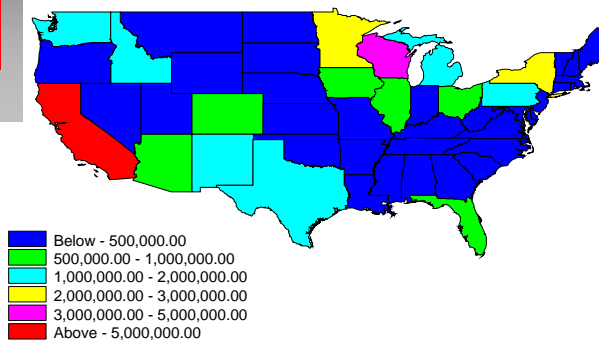

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Information Example: Demand Summed by State

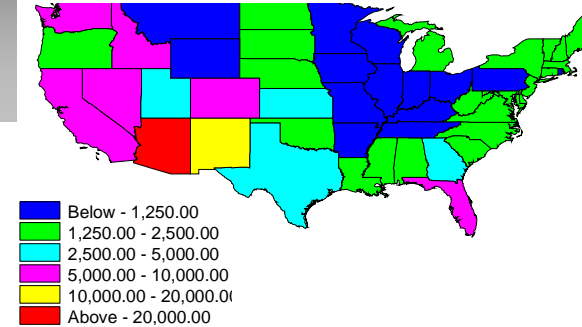

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Knowledge Example: Average Customer Demand by State

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Model Validation

- * Scientific validation method requires repeatability
 - From possible for operational
 - To impossible for strategic
- * Historical benchmark
- * Component validation
- * Sanity check

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Model Types

- * Physical
- * Analog
- * Mathematical
 - Descriptive
 - Normative

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Highway Map: a Printed Analog Model

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Varignon Frame: A Mechanical Analog Model

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Network Flow Formulation: A Mathematical Normative Model

$$\begin{aligned}
 & \text{Min} \quad \sum_i^N \sum_j^N c_{ij} x_{ij} \\
 & \text{s.t.} \quad \sum_h^N x_{hi} - \sum_j^N x_{ij} = b_i \quad \forall i \\
 & \quad \quad 0 \leq x_{ij} \leq u_{ij} \quad \forall ij
 \end{aligned}$$

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Terminology

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Classifications

- * *Deterministic versus stochastic (probabilistic)*
- * *Deductive versus inferential*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Successive Refinement of Models

- ① *Deterministic Descriptive*
- ② *Stochastic Descriptive*
 - *Queuing Analysis*
 - *Simulation*
- ③ *Deterministic Normative*
 - *Mixed Integer Linear Programming*
- ④ *Stochastic Normative*
 - *Mixed Integer Non-Linear Programming*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Advantages

- ① *Definition of Business Objectives, Practices, Structure, and Constraints*
- ② *Definition and Establishment of Business Parameters and Costs*
- ③ *Systematic Evaluation of Alternative System Alternatives*
- ④ *Quick Response Sensitivity Analysis*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Difficulties

- ① *Requires Extensive, Accurate, and Expensive Data*
- ② *Requires Specialized Knowledge and Software (and Computer Hardware)*
- ③ *Long Computation Times for some Design Algorithms*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Summary

- * Realism versus Solvability
- * Successive Refinement
- * Decision Support versus Decision Making

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Modeling Example: Distance between Two Points

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Distance Norms

- * Euclidean

$$d_{ij}^E = L_2 = \sqrt{(x_i - x_j)^2 + (y_i - y_j)^2}$$

- * rectilinear

$$d_{ij}^R = L_1 = |x_i - x_j| + |y_i - y_j|$$

- * Chebyshev

$$d_{ij}^C = L_\infty = \max\{|x_i - x_j|, |y_i - y_j|\}$$

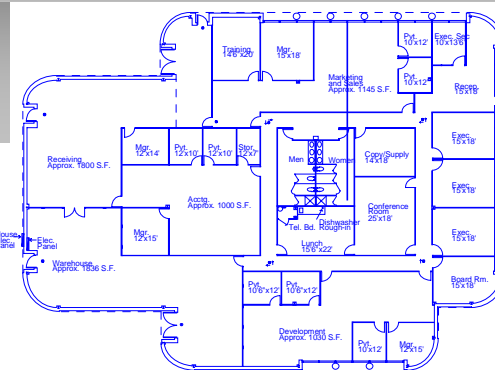

- * Great Circle

7-Mar-03

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Norm Generalization

$$d_{ij}^n = L_n = \sqrt[n]{|x_i - x_j|^n + |y_i - y_j|^n}$$

- * Rectilinear $n = 1$
- * Euclidean $n = 2$
- * Chebyshev $n = \infty$

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Great Circle Distance Norm

- * Modeling Intercontinental Distances (angles in radians)
- * Longitude and Latitude Obtained from Geocoding

$$d_{ij}^{GC} = R \cdot \arccos \left(\cos(lat_i) \cos(lat_j) \cos(lon_i - lon_j) + \sin(lat_i) \sin(lat_j) \right)$$

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Actual Distance Versus Distance Norms

- Dependent on Local Highway or Railway Network Density
- “Standard Factors” for Developed Networks
 - (Ballou, 1998, pp. 557)

	Euclidean	Great Circle
Road	1.21	1.17
Rail	1.24	1.2

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Route Planning to Atlanta Airport

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Point-To-Point Driving Instructions and Distances

Time	Mile	Instruction	For
Summary: 13.9 miles (23 minutes)			
5:00 PM	0	Depart 765 Ferst Dr NW, Atlanta, GA 30318 on Ferst Dr NW (North)	0.3 mi
5:01 PM	0.3	Turn LEFT (North) onto Dalney St NW	0.2 mi
5:02 PM	0.5	Turn RIGHT (East) onto 10th St NW	0.5 mi
5:03 PM	0.9	Turn RIGHT (South) onto Ramp	0.1 mi
5:03 PM	1.1	Merge onto I-75 (I-85) (South)	6.8 mi
5:12 PM	7.8	Continue (South) on I-85	3.6 mi
5:16 PM	11.5	At I-85 Exit 72, turn off onto Ramp	0.4 mi
5:17 PM	11.9	Continue (West) on Airport Blvd (S Terminal Pkwy)	1.0 mi
5:20 PM	12.9	Continue (South-West) on Airport Circle	0.2 mi
5:21 PM	13.1	Bear RIGHT (East) onto N Terminal Pkwy	0.6 mi
5:22 PM	13.7	Turn RIGHT (East) onto Local road(s)	0.2 mi
5:23 PM	13.9	Arrive Hartsfield-Atlanta International Airport	

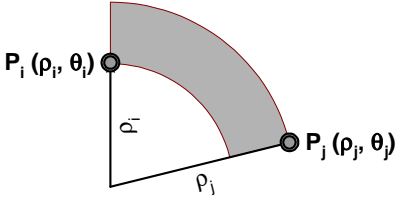

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Ring-Radial Norm

- Old Medieval City Centers

$$d_{ij}^{RR} = \min\{\rho_i, \rho_j\} \min\{|\theta_i - \theta_j|, 2\pi - |\theta_i - \theta_j|\} + |\rho_i - \rho_j|$$

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Introduction Overview

- * Logistics Definition
- * Logistics Planning
- * Engineering Design Process
- * Modeling
- * **Algorithms**

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Algorithm Definition

- * **Algorithm = Set of Rules to Determine System Activities and Configuration**

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Algorithm Characteristics

- * Efficient versus Effective
- * Optimal versus Heuristic
- * Primal versus Dual
- * Construction versus Improvement
- * Alternative Generating versus Alternative Selecting

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Running Time Order of an Algorithm

- * n = Measure of Problem Size
- * T = Run Time of the Algorithm
- * Order Notation

$$\text{if } \begin{cases} T \leq a_m n^m + a_{m-1} n^{m-1} + \dots + a_1 n + a_0 \\ a_m > 0 \end{cases} \\ \text{then } O(n^m)$$

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Running Time of an Algorithm: Growth Illustration

	Problem Size			
	10	20	40	80
Run Time				
n	0.001 seconds	0.002 seconds	0.004 seconds	0.008 seconds
n^3	0.001 seconds	0.008 seconds	0.064 seconds	0.512 seconds
2^n	0.001 seconds	1.024 second	12.43 days	37.43 million millenia

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Discussion of Running Time Order of Algorithm

- * For Sufficiently Large n
 - Order m is better than order $m+1$
 - Leading a_m coefficient usually ignored
- * For Smaller n
 - Better depends on all a_k coefficients
 - Better depends on implementation

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Worst Case Performance of an Heuristic

- * Worst Possible Quality Ratio of the Heuristic for any Instance

$$\min z \Rightarrow \frac{z_{\text{heuristic}}}{z_{\text{optimal}}} \leq K$$

- * Available Only for Very Simple Heuristics
- * Usually Much Larger than Average Quality Ratio
- * A Priori Bound

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Asymptotic Worst Case Performance

- * Worst Case Performance for Very Large Problem Sizes
- * No Worse and Usually Better Than Worst Case Ratio

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Optimality Gap

- * Gap Between Best Feasible Solution and Best Bound for a Specific Instance
- * Upper Bound on Deviation of Optimality of Feasible Solution
- * Bound Quality
- * Composite Algorithms

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Primal and Dual Algorithms

- * **Primal**
 - Maintains feasibility, strives for optimality
 - Feasible at premature termination
 - Rough draft of all sections of report then refine all sections
- * **Dual**
 - Maintains optimality, strives for feasibility
 - Computes bounds on optimal solution
 - Refine introduction section of report until it is perfect before starting next section

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Alternative Generating Algorithms

- * Fast Automatic Generation
- * May be Infeasible
- * Exceptions are Difficult to Handle
- * Approximate Costs
- * Problems that have Simple Structure

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Alternative Selecting Algorithms

- * External Generation Might be Time Consuming
- * Always Feasible
- * Extensions are Easy to Handle
- * Accurate Costs
- * Problems that have Complex Solution Structure

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Solution Algorithms Types

- * *Manual*
- * *Spreadsheet*
- * *Simulation*
- * *Optimization & Heuristics*
- * *Expert Systems*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Manual Algorithms

- * *“Back-of-Envelope” and “Executive Privilege”*
- * *No Formalized Objective, Model, or Solution Algorithm*
- * *As Good as the Decision Maker*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Spreadsheets

- * *Alternatives (Columns) and Costs (Rows)*
- * *Alternatives are Pre-generated*
- * *Costs are Pre-computed*
- * *As Good as the Preprocessing*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Network Simulation

- * *Simulation of Stochastic Network*
- * *One Alternative at the Time*
- * *Very High Fidelity*
- * *Simulation Model Needs to be Created*
- * *Limited Number of Alternatives*
- * *As Good as the Alternatives*

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Simulation and Animation of a Material Handling System

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Optimization and Heuristics

- * Alternative Generating or Alternative Selecting
- * Exact or Approximate Solutions
- * Primal or Dual Algorithms
- * As good as the Heuristic
- * Long Computation Times

7-Mar-03

Logistics Systems Design

Marc Goetschalckx

Expert Systems

- * Available for operational and scheduling decisions
- * Non-existent for tactical and strategic problems

7-Mar-03

Logistics Systems Design

Marc Goetschalckx
